Click2Enter, Inc., is Proud to Announce the Following:

CLICK2ENTER TECHNOLOGY HAS BEEN APPROVED AND MANDATED BY WAY OF CITY/COUNTY ORDINANCE FOR USE ON ALL ELECTROMECHANICAL GATES IN THE HISTORIC CITY OF SAVANNAH & CHATHAM COUNTY, GEORGIA

Sonoma, California, Wednesday, April 16, 2008 - The Savannah-Chatham County Metropolitan Planning Commission has written an emergency access control ordinance which has ultimately been adopted by both The City of Savannah and Chatham County effective January 1, 2009. The ordinance mandates (retroactively) that all electromechanical gates, within the city and county, must be fitted with a public safety radio frequency-controlled, mutual-aid compatible emergency gate access control system. The Click2Enter-I emergency gate access control system from Click2Enter, Inc. has been chosen as to fulfill this mandate. Mr. Stephen Lufburrow, Immediate Past Chairman of The Savannah-Chatham County Metropolitan Planning Commission said "I am pleased to have been able to work with the other members of the Planning Commission on this Ordinance which will provide universal access control for all of the various public safety agencies operating in our cities and county." Mr. Lufburrow went on to say that he "believes that the citizens, who live behind gates, will be even safer with the use of the Click2Enter because gate codes no longer will be needed to gain access, mutual agency operations are supported, and most importantly response times are improved."

Recently interviewed by the Savannah Morning News, Captain Matt Stanley, spokesman for the Savannah Fire and Emergency Services said "In an emergency, any time you can save a minute or two can save someone's life." Some people who work for and live in gated communities welcome the idea of quicker access for emergency responders. "A lot of those places aren't manned at night," said Elaine Seabolt, owner and president of Seabolt Brokers, who lists homes in Columbia Place in the Historic District. "If you're having a heart attack, you're not thinking about a gate code to give to the fire department or the police."

Click2Enter-I (C2E) allows any radio transceiver (mobile or portable) to act as an access control device. The C2E is a powerful, intelligent, multi-user device which provides emergency response personnel improved response times, immediate, stealthy, secure, and universal access to gates, bollards, roll-up/security doors etc. No modifications to their present, mobile or portable, radios are required. No cost to the public safety agency. To operate, you only need be in sight of the C2E and pulse your radio and the device opens—it's that fast and simple. Up to fifty different frequencies can be programmed into one C2E device. Each C2E can operate within the entire spectrum of available frequencies, typically allocated to public safety agencies. For public safety organizations the C2E supports mutual aid operations, improved response times, and stealth operation for officer safety. The Click2Enter system is proven, reliable, and MANDATED by many Public Safety agencies throughout the United States.

Click2Enter is used by the United Sates Border Patrol on the new security fence located in the San Diego California Sector. Mandated by public safety agencies throughout the United States, the following are some of the agencies who mandate the Click2Enter emergency access control system: Sacramento Metropolitan Fire District, City of Irvine California, City of Oxnard California, City of Fairfield California, City of Napa California, City of Pasadena Texas, (these are just a few of the many cities and counties mandating the Click2Enter around the United States).

END
